

## CONTENTS

<b>Sikora B.</b> Controllability criteria for time-delay fractional systems with a retarded state . . . . .	521
<b>Kaczorek T. and Borawski K.</b> Fractional descriptor continuous-time linear systems described by the Caputo–Fabrizio derivative . . . . .	533
<b>Amairi M.</b> Recursive set membership estimation for output-error fractional models with unknown-but-bounded errors . . . . .	543
<b>Karczewska A., Rozmej P., Szczeciński M. and Boguniewicz B.</b> A finite element method for extended KdV equations . . . . .	555
<b>Schwaller B., Ensminger D., Dresch-Langley B. and Ragot J.</b> State estimation for MISO non-linear systems in controller canonical form . . . . .	569
<b>Byrski J. and Byrski W.</b> A double window state observer for detection and isolation of abrupt changes in parameters . . . . .	585
<b>Bartczuk Ł., Przybył A. and Cpałka K.</b> A new approach to nonlinear modelling of dynamic systems based on fuzzy rules . . . . .	603
<b>Beddiaf S., Autrique L., Perez L. and Jolly J.-C.</b> Heating source localization in a reduced time . . . . .	623
<b>Grosso J.M., Ocampo-Martinez C. and Puig V.</b> Reliability-based economic model predictive control for generalised flow-based networks including actuators’ health-aware capabilities . . . . .	641
<b>Bilski A. and Wojciechowski J.</b> Automatic parametric fault detection in complex analog systems based on a method of minimum node selection . . . . .	655
<b>Martínez P.A., Castelán M. and Arechavaleta G.</b> Vision based persistent localization of a humanoid robot for locomotion tasks . . . . .	669
<b>Zhang F., Zhai Y. and Liao J.</b> A new sufficient schedulability analysis for hybrid scheduling . . . . .	683
<b>Różycki R., Waligóra G. and Węglarz J.</b> Scheduling preemptable jobs on identical processors under varying availability of an additional continuous resource . . . . .	693
<b>Li S., Sun W., E C.-G. and Shi L.</b> A scheme of resource allocation and stability for peer-to-peer file-sharing networks . . . . .	707
<b>Koczkodaj W.W. and Szybowski J.</b> The limit of inconsistency reduction in pairwise comparisons . . . . .	721
