

## Appendix 1— Radiocarbon dates from excavated archaeological sites described in these proceedings

### Notes

1. Radiocarbon ages are quoted in conventional years BP (before AD 1950) and the errors for these dates are expressed at the one sigma (68% probability) level of confidence.
2. Calibrated date ranges are equivalent to the probable calendrical age of the sample material and are expressed at one sigma (68% probability) and two sigma (95% probability) levels of confidence.
3. Dates obtained from BetaAnalytic in Florida (Beta lab code) and from University College Dublin (UCD lab code) were calibrated using the IntCal98 calibration programme (Stuiver *et al.* 1998). Dates from Queen's University, Belfast (UB lab code) were calibrated using the University of Washington calibration programme (Stuiver and Reimer 1986). Dates from the Oxford Radiocarbon Accelerator Unit (OxA lab code) were calibrated using the OxCal programme (Bronk Ramsey 2002).
